Projects

12/2024 – Present

AI Model Project - Sinapsis AI, Project Leader

Led the design and development of **SinapsisAI**, a multi-layered AI model architecture built with seven core protocols (Perception, Memory, Emotion, Reasoning, Language, Decision, Values). The project focuses on delivering **enterprise-ready AI solutions** for the banking and fintech sector, with applications in **automation, clearing/settlement systems, and secure data processing**.

Key contributions:

- Designed and implemented AI pipelines for **data ingestion, fine-tuning, and model optimization**.
- Integrated **Python, FastAPI, Docker, and vector databases (Milvus/FAISS)** to build scalable infrastructure.
- Developed prototypes for **intelligent decision-making and natural language interaction**.
- Positioned SinapsisAI as a future-ready solution for **digital governance and enterprise AI adoption**.
